In comparison, a DVD player may support VOB, VOB (DVD) MTS, M2TS, MPEG-PS, MPEG-TS and MOV files. An M2TS (two-time-stream) DVD also has two menus (language and chapter) at the top of the video for the user to choose. DVD Video may be displayed as a slideshow with AVCHD (high definition), AVC (normal definition), and MPEG (standard definition) video types. The AVCHD video may have a Dolby TrueHD audio track, or a DTS-HD Master Audio track. The DVD player may be called a DVD player/recorder. In television, a set top box (STB) is a device that connects a television set and a VCR, allowing the viewer to record programs on a VCR using the remote control of the television set. Modern STBs may have more advanced features, such as an Internet connection and PVR (personal video recorder) functionality. There are also other types of STBs, such as converters and cable modems. Digital audio players Digital audio players are devices used for storing and playing digital audio files, such as MP3 files. MP3 files may be stored on memory cards (which were called simply "audio cassettes" in the early days of MP3), CD-Rs, CD-RWs, and DVD-Rs and DVD-RWs. An MP3 player may contain hard drive or flash memory. Memory cards and hard drives are removable storage media, and are commonly carried in the user's pocket or attached to their belt. Flash memory cards and hard drives are non-removable and are generally mounted internally to the player. The user may select a song to play and, when finished, the device's storage media may be ejected. The user may then insert another memory card (or hard drive) and select a new song. The user's choice of which song to play may be displayed on the front of the device. Most models also have a display to inform the user when an additional memory card (or hard drive) is available. Some MP3 players can record audio to a memory card or hard drive at the same time it is playing an audio file. Some can download digital files from the Internet directly to a memory card or hard drive. The most common form of digital audio player is the MP3 player, in use in more than 50% of computers and more than 40% 82157476af
